

PBS Pro™: The Trusted Solution for Workload Management

VERIDIAN

Veridian Congratulates DoD And NASA

NEWS BRIEFS

04/20/01

Mountain View, CA -- Veridian offers congratulations to SGI, ERDC MSRC, and NASA Ames on their 512 Origin 3800 systems. The 3800 is the largest shared-memory configuration currently available in the SGIä Originä 3000 server series. Veridian's PBS Products Department is proud

to be a play a role in this effort.

Veridian's professional edition of the Portable Batch System, PBS Pro, is the workload management system managing jobs on both of these 512 cpus systems. PBS Pro supports the IRIX "cpusets" which dynamically partitions the system, allowing a user's job virtual exclusive access to the cpus and memory requested. ERDC is benefiting from the highly configurable standard scheduler provided with PBS Pro. NASA Ames is taking advantage of the flexibility with PBS Pro which allows them to utilize a locally developed scheduler module. For more about PBS Pro, please visit <http://www.pbspro.com>.

Veridian is an information technology solutions company serving government and commercial customers. A private company with annual revenues of \$650 million, Veridian operates at more than 50 locations in the US and overseas, and employs nearly 5,000 computer scientists and software development engineers, information security specialists, systems analysts, scientists, engineers and other information technology professionals.

The company is known for building strong, long-term relationships with a highly sophisticated customer base. Additional information about Veridian can be found at <http://www.veridian.com>.
